Projects

Image to Prompt System   *Feb 2023 - May 2023*

- Which can infer possible prompts that could have generated an uploaded image.
  It utilizes **Python** as the core programming language, **PyTorch** as the machine learning framework, and **Django** as the web backend.

Customer Default Prediction Mobile   *Oct 2022 - Nov 2022*

- Developed a mobile application version using **Flutter**, which utilizes API integration for query actions.
  The trained model enables the prediction of credit default rates for bank customers, aiding the bank in risk management and mitigation.

Automated Attendance Tool for Zuvio   *2023*

- Developed an automated attendance system using **Python**, leveraging **BeautifulSoup** and **Requests** libraries for web scraping capabilities.
  The system automates the attendance process by extracting student data from web sources. Additionally, integrated GPS functionality enables automated check-ins based on location.
